### Description

The FIBER ARMCHAIR has been designed to balance maximum comfort with minimum space. The chair has been produced from an innovative bio-composite material that includes 25% wood fibres. From a distance, the shell appears to be normal smooth plastic, however, when viewed up close the tiny pieces of the wooden fibres become apparent, giving the chair a whole new character.

With the addition of four different bases, FIBER has flourished into a fully-fledged family of 39 chairs, confident of finding the ideal style to suit the individual home, office or other public setting.
